## Meto spray robot

### We offer you:

- Uniform spray quality
- Reliable & flexible system
- User-friendly control
- Suitable for intensive use

With the Meto spray robot, you can rely on the highest attainable spray intensity. The robot's design is focused on user-friendliness, for both the control and for carrying out maintenance activities. The spray robot is equipped with two spray booms, which are separately controlled. One spray boom directed at the crop and the other on the gabel end wall of the greenhouse. This setup gives your crops optimal protection. The Meto is also the right choice considering your employees' health. Your employee does not need to enter the crops during the spraying activities.

# Meto spray robot

If required, the Meto can be fitted with a battery exchange set. This can double the running capacity

The touchscreen control is simple and available in several languages. English, Dutch, German, French, Spanish, Polish and Russian. Other languages on request

In combination with the Trans, the Meto can automatically move from path to path

The use of different nozzles and two spray booms provide optimal distribution on the crop
