

## Benomic S-Line scissor lift

### We offer you:

- Substantial increase in driving range, lower maintenance costs
- Future-proof and flexible
- Improved stability throughout the series
- Ergonomic and safe according to TÜV

The Benomic S-Line mobile scissor lift is specially developed for the cultivation and care of high-wire crops, with the tallest model extending to a height of 6.6 m. In accordance with the **latest legislation** and regulations, safety measures have been taken in both construction and control. The various roundings ensure **less dirt on the wagon** and makes it easier to clean. This makes these ergonomic scissor lift trolleys, due to the **two-sided access** and the controlled stop when the platform is lowered, very user-friendly.

The smart control panel with built-in USB port places all control functions at the user's fingertips, and showing all relevant status information. And of course, with a compact, stable and **robust construction**, the mobile scissor lift is easy to manoeuvre on paved floors and paths.

# Benomic S-Line scissor lift

Double entrance with automatically closing doors and modern control console with USB connection for mobile phone or fan.

A modern motor combined with a new battery pack gives a 2x greater operating radius, needs to be charged less often and requires less maintenance.

Optimal force distribution on the scissors for improved stability and a maximum height of 6.6 m.

Ergonomically arranged for the user and tested according to the requirements of the TÜV for pleasant and safe working.
