

## PepperShuttle

### We offer you:

- Security through the use of proven technology
- Easy to use
- Efficient use of equipment
- Clear system

The PepperShuttle combines a harvest container and a scissor lift trolley. This enables you to use the container for the harvest and the Benomic scissor lift trolley for lifting the harvest container but also for normal crop work. This means that you need fewer scissor lift trolleys and you will always have one at your disposal, even when the harvest is being transported to the packaging area. Transport to the packaging area is done by connecting the shuttles to each other and then to a BeTrac.

Container

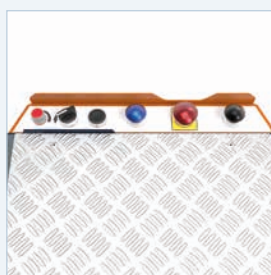

Benomic scissor lift trolley

Shuttle

Easily accessible components and proven technology ensure simple and minimal maintenance.

A double control panel and foot pedal ensure easy control independently of the direction of travel.

Pull the shuttle over the Benomic scissor lift trolley when having to harvest at height.

## Technical specifications PepperShuttle
